COPYRIGHT ASSIGNMENT

This Assignment is effective this 22 day of May, 2026, by and between SAE International, a Pennsylvania not-for-profit corporation having a place of business at 400 Commonwealth Drive, Warrendale, PA 15096-0001 ("SAE"), and

Author(s)/Assignor(s): Heyang Zhang, Meixin Wu, Junze Xie (collectively, through the below authorized agent, the "Assignor").

Event Name/Title of Journal (only if applicable):

2026 2nd International Conference on Aerospace Engineering and Materials Technology (AEMT 2026)

Title of Article/Work: Adaptive Regulation of Micro Closed Loop Space Station Ecosystems Using Proximal Policy Optimization ("Work").

Paper Number: 226032021333995507

Assignor, as a duly authorized agent of all named authors, hereby assigns to SAE all rights, titles and interest in and to Assignor's copyright in the Work in the exclusive rights. If the Work is a work-made-for-hire pursuant to 17 USC § 101 of the Copyright Act, then such undersigned entity (e.g., employer, consortium, sponsoring entity) shall be deemed the Author for purposes of this Assignment and is the only recognized entity able to assign copyright. All works, image and text, created for an entity as part of a contracted position may be considered third party content. If said content is incorporated in the aforementioned Work, it is the responsibility of the author(s) to certify and carryout the requirements for acquiring republishing permission prior to submitting for publication, and the authors are required to include the appropriate licensing release documentation with the final Work.

Assignor represents, warrants and guarantees that (1) the Work is an original unpublished work; (2) Assignor is the sole and exclusive owner and claimant of all rights, titles and interest in and to the Work, including all copyrights therein, no other party, including an employer or contract provider may claim ownership to the Work's attributed copyrights, and neither the Work nor copyrights have been assigned, transferred or otherwise encumbered; (3) the Work contains no material which would violate any copyright or other personal or proprietary right of any person or entity if published including the incorporation of content generated from artificial intelligence (AI) technologies; (4) the Work is not a work made for the United States Government or a foreign government; (5) Assignor has the authority to transfer the rights to SAE and cause this Assignment to be executed as of the date first written above; (6) Assignor has obtained written authorization to execute this Assignment as a duly authorized agent of all named authors; and (7) the Work as a whole constitutes an original work of authorship by Assignor and was not generated by AI technologies. Assignor further represents, warrants and guarantees to indemnify SAE in the event a claim is made of copyright ownership for the Work or a portion thereof.

Assignor further represents, warrants and guarantees, to the best of Assignor's knowledge and ability, that the Work is NOT controlled for export from the United States to any non-U.S. person or any other nation under the International Traffic in Arms Regulations (22 CFR Parts 120–130) or the Export Administration Regulations (15 CFR Parts 730–774) and, accordingly, may be modified, used, copied,

SAE INTERNATIONAL

distributed or circulated by SAE, in whole or in part, without any export licenses under the foregoing regulations.

Assignor agrees that it shall not dispute, contest, aid or assist others in disputing or contesting, either directly or indirectly, SAE's exclusive rights, titles and interest in the Work and in any and all compilations, customizations, collective works and/or derivative works based on the Work, including copyrights therein or other proprietary rights therein claimed by SAE.

Assignor agrees that, for no additional compensation, Assignor will execute any and all documents that may be necessary to assist SAE to register, protect and enforce SAE's rights in and to the Work and any and all compilations, customizations, collective works and derivative works based on the Work.

SAE hereby grants Assignor the nonexclusive right to reproduce and distribute the Work (including tables, graphs or other figures therein) in print and electronic format following six (6) months after first publication by SAE. Assignor may reproduce and distribute the Work for non-commercial purposes only, and the Work shall not be offered for sale or used to imply endorsement by SAE of a service or product. For the avoidance of doubt, posting the Work to any website or other platform is not permitted, including, but not limited to, ResearchGate and LinkedIn. Notwithstanding the foregoing, Assignor may reproduce and distribute Assignor-authored individual tables, graphs or other figures included in the Work, in additional Assignor-authored publications, for commercial purposes. Any reproduction or distribution of the Work (including tables, graphs or other figures therein) must acknowledge SAE as original publisher and include the names of all author(s), the publication title, and an appropriate copyright notice that identifies SAE as the copyright holder. The Assignor may also post an electronic version of the accepted manuscript version of the Work to an academic institutional repository, but not the final, typeset Work. The final, typeset, published version of the Work may not be posted online in any manner to accommodate free public access without prior written approval by SAE.

When submitting approved third-party, employer or governmental copyright authorizations to SAE International, please include a copy of the licensed material clearly indicating the intended location, including new figure/ table number and caption title for use in the new product published by SAE International.

Changes or modifications to this form are not permitted without permission from SAE
